

readme

First, install the dependencies with `pip install -r requirement.txt`

Then, run each script with `python3 <script_name>` where `<script_name>` is `dl.py`, `ul.py`, `bonus.py`. The script will produce the results (position, received power, SINR) in a png file (`downlink.png`, `uplink.png`, `bonus.png`)

`helper.py` doesn't need to be ran, it contains helper functions for the scripts.
